experience or observation. Sin W. Hamilton. According to some acceptations of the word metaphysical, which seem to make it synonymous with transcendental, and referable solely to the operations of pure reason, to the rejection of whatever is founded on experiment, none of Hume's works are properly metaphysical; and by the very foundation he has given to his philosophy, he has made it empirical, and consequently not metaphysical. J. H. Burton.

Now here again we may observe the error into which Locke was led by confounding the cause of our ideas with their occasion. There can be no idea, heargees, prior to experience; granted. Therefore he concludes the mind previous to it is, as it were, a tabula rana, owing every notion which it were, a tabula rana, owing every notion which it gains primarily to an emperical source. F. D. Morell.

En-, A common adverbial or prepositional

En-. A common adverbial or prepositional prefix in English words, from L. in, as endue, or from Gr. en, as enclitic, or it simply represents the E. in, as enwrap. Words in English which contain the Gr. en are mostly scientific or technical terms of modern forma-tion, though others, such as enthusiasm, form tion, though others, such as enthusiasm, form a portion of our everyday vocabulary. En, derived from the L. in, in many cases apears in words that have come to us through the French, though in other cases compounds with en are merely formed on the model of such Romance words, the Latin or English in assuming this form from the influence of the French. Hence, a form in en and one in in are frequently found co-existing as everyon inverse everyon in the interest services. and one in m are frequently found co-existing; as, enwrap, inwrap; engulf, ingulf; enquire, inquire; with, however, a tendency in one or other of the forms to disappear, except when, as in ensure, insure, a special meaning has been assigned to each. Before labials en becomes em, as in embellish, embrace labiar en transportation of the contraction of the labials en becomes em, as in embellish, embrace, but may remain unchanged before m, as enmew or emmew, enmarble. As a verbal prefix en sometimes retains its original meaning of in, as encage, engaol, enfetter; or it denotes a change from one state into another, as enable, enrich, enslave, enfranchise, enlarge, and hence has often the effect simply of a verb-forming prefix; sometimes it seems to have little indicates on the meaning of the principal

prefix; sometimes it seems to have little influence on the meaning of the principal word, as in enkindle, encaptivate.

En, A suffix of common occurrence in English words, having several origins and uses. (a) It is a vert-forming suffix (in A. Sax.—nian), as in fatten, freshen, whiten, sweeten, &c. (b) It is an adjective-forming suffix from nouns signifying some kind of substance or material (common also in A. Sax.), and in this usage represents an old genitive, as in golden, wooden, oaken, &c. (c) It is also a feminine suffix, as in vixen; and perhaps a diminutive, as in maiden. (d) It was formerly a plural termination of nouns and of verbs, as housen, escapen, and is still retained in oxen, children.

English (ing'glish), n. 1, One of the Low Ger-

English (ing'glish), n. 1. One of the Low German group of languages, and that spoken by the people of England and the descendants of natives of that country, as the Americans, Canadian and Australian colonists, &c. It of natives of that country, as the Americans, Canadian and Australian colonists, &c. It is a direct development of Anglo-Saxon (which see), and hence many people object to the distinction made between English and Anglo-Saxon, holding that the language ought to be called English throughout all the periods of its history, as it was among the Anglo-Saxons themselves. Although a direct development of Anglo-Saxon, that development did not proceed regularly and gradually by the action of internal causes, but was influenced from without by the Norman Conquest, the immediate result of Norman Conquest, the immediate result of which was that the language of the Normans (Norman-French, the chief element of which was Latin) became the chief literary language was nathified and the latter a rappears of England, Anglo-Saxon taking a very sub-ordinate place. When the latter reappears after the Conquest as a written language, we find that, instead of being highly inflected or synthetic, as it was before that event, it has become analytic, that is, prepositions and auxiliaries are now used instead of inflec-tional prefixes and terminations to express the various modifications of the idea conthe various modifications of the idea contained in any word, and the relations of the words in a sentence to one another. The vocabulary, however, appears but slightly affected, the Norman words in it being so few as scarcely to be worth taking into necount. About the middle of the thirteenth century, the period from which English proper is usually regarded as taking date, a considerable number of Norman words make their appearance among those of Anglo-Saxonorigin, suchwords having been adopted by writers of the subject race who wished to make themselves intelligible to both peoples, the Normans by this time, as it would seem, Saxon origin, suchwords having been adopted by writers of the subject race who wished to make themselves intelligible to both peoples, the Normans by this time, as it would seem, having begun to make use of Anglo-Saxon. There appear to have been three chief dialects of English—the Northern, Midland, and Southern, the second of which gradually became the dominant and literary dialect of the country, and is thus the immediate parent of our present English. Regarded in its widest acceptation as embracing both Anglo-Saxon and English proper, English has been divided into five periods:—(1) English of the first period, from 450 (the period when the Teutonic invaders began to make settlements in the country) to 1100. In this stage the language was synthetic, not analytic. The Beowulf is the most noted example of the English of this period. (2) English of the second period, from 1100 to 1250, when the influence of the Conquest begins to be perceived to a slight extent in the vocabulary and in a general weakening of the terminations. Of this period Layamon's Brut, a metrical chronicle of legendary British history, compiled chiefly from the French by a Worcestershire monk named Layamon, who lived about 1200; and the Ormalum, a long paraphrase of Scripture with a commentary, prepared by a monk called Orm or Ormin about 1215, may be cited as examples. (3) The third period, from 1250 to 1350, when inanimate objects begin to have no longer gender but to be classed as neuter. The infinitive takes 'to' before it, and the present participle ends in ing.' The metrical chronicles of Robert of Gloucester and Robert De Brume are examples of this period, (4) The fourth period, from 1360 to 1460, when the Midland dialect has become the prevailing one. This period embraces the names of Chaucer and Gower. (5) The fifth period, from 1400 to the present time, the course of which the language was to a great extent stereo-

typed by the works of Shakspere and Milton, typed by the works of Shakspere and Milton, the publication of the Prayer-book, and above all, by the translation of the Bible. The language is now highly analytical, being the least inflectional of any of the Indo-European tongues. Although the English language is Teutonic as regards its grammar and particles, as well as the great proportion of words in daily use, yet perhaps no language has incorporated so many foreign words. The chief sources from which these contributions have been received are Norman-French, French and the other Romance languages. Latin, and Greek, besides contributions of greater or less extent from Celtic, German, Dutch, Hebrew, Persian, Hindu, Chinese, Turkish, Malay, American, &c. A great many of the terms borrowed from the last-mentioned languages are the names of which did not previously exist in English.—2. As a collective noun, the people of England.—3. Dawson, the geologist, to asupposed gigantic fossil foraminifer, found in the Laurentian rocks of Canada. If really an animal organism it is the oldest form of life traceable in the past history of the globe. See

extract.

The writer (Mr. T. Mallard Reade) asserts that structures called evacovial have not yet been discovered in any unaltered rocks, while they are abundant in metamorphosed rocks; and argues, from this and other reasons, that Professors King and Rowney are right in holding the evacovi to be a mere mineral structure occasioned by the metamorphism of the rock. Dr. Carpenter replies that the evacovial structure is most characteristically displayed in those portions of the serpentine limestone of the Laurentian formation which have undergone the least metamorphic change, reiterating the arguments derived from the structure itself, which have led him and most other geologists to consider the evacova as of indubitable organic origin.

Of the Greek epics Homer's Ikiad and Odyssey are the principal. The Eneid of Virgil is the most distinguished Roman epic. Tasso's Gierusalemme Liberata and Dante's Divina Commedia are the principal Italian epics. The greatest English epic poem is Milton's Paradise Lost.

The subject of the epic poem must be some one

The subject of the epic poem must be some one great, complex action. The principal personages must belong to the high places of the world, and must be grand and elevated in their ideas and in their bearing. The measure must be of a somorous dignity befitting the subject. The action is carried on by a mixture of narrative, dialogue, and sollioque, Briedly to express its main requisites, the epic poem treats of one great, complex action, in a grand style, and with fulness of detail.

[Gr. epigramma, inscription—epi, and gramma, a writing, from grapho, to write.] In a restricted sense, a short poem or piece in verse, which has only one subject, and finishes by a writty or ingenious turn of thought; in a general sense, an interesting thought represented hought in a few words whether general sense, at more saint conjugate represented happily in a few words, whether verse or prose; a pointed or antithetical saying. The term epigram was given by the Greeks to a poetical inscription placed upon a tomb or public monument, as upon the a tomo or puole monument, as upon the face of a temple or public arch, and was afterwards extended to every little piece of verse expressing with precision a deli-cate or ingenious thought, as the pieces in the Greek anthology. In Roman classical poetry the term was somewhat indiscriminately used to designate a short piece in verse, but the works of Catullus, and espe-cially the epigrams of Martial, contain a great number with the modern epigrammagreat number tic character.

tic character.

From the time of Martial, indeed, the epigram came to be characterized generally by that peculiar point or sting which are now looked for in a French or English epigram; and the want of this in the old Greek compositions doubtless led some minds to think them tame and tasteless. [L. æquo, æquatim, to make level or equal, from æquus, level, equal.] To make equal; to reduce to an average; to make such correction or allowance in as will reduce to a common standard of comparison, or will bring to a true result; as, to equate payments; to equate observations in

astronomy.

Equation (ë-kwä'shon), n. [L. æquatio, from equo, to make equal or level.] 1.† A making equal, or an equal division; equality.

Again the golden day resumed its right, And ruled in just equation with the night. Rowe.

2. In alg. a proposition asserting the equality of two quantities, and expressed by the sign = between them; or an expression of the same quantity in two dissimilar terms, but of equal value; as, 3s. = 36d. or x = b + m - r. In the latter case x is equal to be added to m, with r subtracted, and the quantities on the right hand of the sign of equation are said to be the value of x on the left hand. An equation is termed simple, quadratic, cubic, or biquadratic, or of the first, second, third, or fourth degree, according as the index of the highest power of the unknown quantity is one, two, three or four. And generally an equation is said to be of the 5th, 6th, nth, &c., degree, according as the highest power of the unknown quantity is of any of these dimensions.—3. In astron. the correction or quantity to a dimensions.—5. In astron. the correction or quantity to be added to or subtracted from the mean position of a heavenly body to obtain the In alg. a proposition asserting the equaposition of a heavenly body to obtain the true position; it also, in a more general sense, implies the correction arising from

any erroneous supposition whatever.—
4. In chem. a collection of symbols to denote that two or more definite bodies, simple or compound, have been brought within or compound, have been brought within the sphere of chemical action, that a reac-tion has taken place, and that new bodies are produced. It is called an equation because the total weight of the substances occarried remains the same.—Equation to corresponding altitudes, in astron. a correction which must be applied to the apparent time of noon (found by means apparent time of noon (found by means of the time elapsed between the instants when the sun had equal altitudes, both before and after noon) in order to ascertain the true time.—Equation of the centre, in astron. the difference between centre, in astron, the difference between the place of a planet as supposed to move uniformly in a circle, and its place as moving in an ellipse.—Equation of equinoxes, in astron, the difference between the mean and apparent places of the equinox.—Equation of pagments, an arithmetical rule for the purpose of ascertaining at what time it is equitable that a person should make payment of a whole debt which is due in different parts, provide at different times. ferent parts, payable at different times.— Equation of time, in astron, the difference between mean and apparent time, or the re-duction of apparent unequal time, or motion, of the sun or a planet to equable and mean time or motion.—Personal equation, in astronomical observations, aname given to the quantity of time by which a person is in the habit of noting a phenomenon wrongly; it may be called positive or negative, according as he notes it after or before it really takes place. **Equator** (ē-kwā'tèr), n. [L.L. æquator

from L. equo. equatum, to make equal.]

1. In astron. that imaginary great circle in the heavens, the plane of which is perpendicular to the axis of the earth. It is everywhere 90° distant from the celestial pendicular to the axis of the earth. It is everywhere 90° distant from the celestial poles, which coincide with the extremities of the earth's axis, supposed to be produced to meet the heavens, and its axis is this produced axis. It divides the celestial sphere into the northern and southern hemispheres. During his apparent yearly course the sun is twice in the equator, at the beginning of spring and of autumn. Then the day and night are equal, whence the name equinox.—2. In geog. that greateries of our globe, every point of which is 90° from the poles, which are also its poles, its axis being also the axis of the earth. It is in the plane of the celestial equator. All places which are on it have invariably equal days and nights. Our earth is divided by it into the northern and southern hemispheres. From this circle is reckoned the latitude of places both north and south.—Magnetic equator, a line which pretty nearly coincides with the geographical equator, and at every point of which the vertical component of the earth's magnetic attraction is zero; that is to say, a dipping needle carried along it remains horizontal. It is hence called the actinic line.

Equatorial (ē-kwa-tō'ri-al), n. An astrono-mical instrument, contrived for the purpose of directing a telescope upon any celestial object of which the right ascension and of directing a telescope upon any celestial object of which the right ascension and declination are known, and of keeping the object in view for any length of time, notwithstanding the diurnal motion. For these purposes a principal axis resting on firm supports is placed parallel to the axis of the earth's rotation, and consequently pointing to the poles of the heavens. On this polar axis there is placed, near one of its extremities, a graduated circle, the plane of which is perpendicular to the polar axis, and therefore parallel to the equator. This circle is called the equatorial circle, and measures by its arcs the hour angles, or differences of right ascension. The polar axis earries a second circle, called the declination circle, the plane of which is at right angles to that of the equatorial circle. This last circle has a telescope attached to it for making observations, and which moves along with it in the same plane. The name equatorial, or equatorial instrument, is sometimes given to any astronomical instrument. which has its principal axis of rotation parallel to the axis of the carth.

Equatorially (ë-kwa-tō'ri-al-li), adv. So as

Bquiform (e'kwi-form), a. [L. æquus, equal, and forma, form.] Having the same shape, form, or make. [Rare or obsolete.] Equiformity† (e-kwi-formi-ti), n. Uniform equality. 'Equiformity of motion.' Sir T.

Browne.

Equilateral (ö-kwi-lat'er-al), a. [L. æquus, equal, and lateralis, from latus, a side.]

Having all the sides equal; as, an equilateral triangle;

a square must necessarily

be equilateral.— Equilateral bivalve, a shell in which at transverse line, drawn
through the apex of the
umbo, bisects the valve into
two equal and symmetrical
parts.—Equilateral hyperbola, a hyperbola which has

bold, a hyperbola which has the two axes equal to one another, the asymptotes forming a right angle. Equilateral (e-kwi-lateral), n. A side exactly corresponding to others in length, or a figure of equal sides. Equilibrate (e-kwi-livrat), v.t. pret. & pp. equilibrated; ppr. equilibrating. [L. equus, equal, and libro, to poise.] To balance equally; to keep even with equal weight on each side; to keep in equipoise.

Equilibrium (e-kwi-h'dd), n. [L. equi-tibrium, an even balance, from equilibris. See Equilibris.] 1. In mech. equipoise; equality of weight or force; a state of rest produced by the mutual counteraction of two or more forces, as the state of the two ends of a lever or balance, when both are charged with equal weight, and they main-tain an error or level positions wells. entities of a tever or biamnee, when both are charged with equal weight, and they maintain an even or level position, parallel to the horizon. When two or more forces acting upon a body are so opposed to each other that the body remains at rest, although one of them would move it if acting alone, those forces are said to be in equilibrium, that is, equally balanced. See STATICS.—Stable, unstable, and neutral or indifferent equilibrium. When a body, being slightly moved out of any position in which it rests upon another body, always tends to return to its position, and, being left to itself, will roll back of its own accord into it, that position is said to be one of stable equilibrium; when the body will not thus return to its previous position, is so it so it is position, is said to be one of unstable sand to be one state equatorizing, when the body will not thus return to its previous position, its position is said to be one of unstable equilibrium; and when a body, being moved more or less from its position of equilibrium, will rest in any of the positions in which it is placed, and is indifferent to any particular position, its equilibrium is said to be neutral or one of indifference. A perfect sphere, of uniform material, resting upon a horizontal plane, is in a state of neutral equilibrium, an oblate spheroid, with its axis of rotation vertical, is in stable equilibrium, while a prolate spheroid, with its axis vertical, is in unstable equilibrium on the same plane. A body suspended by its centre of gravity is in a state of neutral or indifferent equilibrium. If a body be suspended by any other point it will be in a state of stable equilibrium when its centre of gravity is perpendicularly when its centre of gravity is perpendicularly below the point of suspension, but if the centre of gravity be above the point of suspen-sion the equilibrium will be unstable.—2. A sion the equilibrium will be unstable.—2. A state of just poise; a position of due balance; as, to preserve the equilibrium of the body; take care you do not lose your equilibrium.

3. In the fine arts, (a) the just poise or balance of a figure or other object so that it may appear to stand firmly. (b) The due equipoise of objects, lights, shadows, &c.—4. Equal diffusion or distribution, as of temperature, which all bodies on the earth tend to produce, of the electric fluid in its natural undisturbed state, &c.—5. Equal balancing of the mind between motives or respons undisturbed state, &c.—5. Equal balancing of the mind between motives or reasons; a state of indifference or of doubt, when the mind is suspended in indecision, between different motives or the different forces of evidence.—6. Equality of influence or effect; due or just relationship.

Health consists in the equilibrium between these Arbuthnot. 7. In politics, balance of power. See under BALANCE.—In equilibrio, in a state of equi-

2. In haw, an equitable claim.

I consider the wife's equity to be too well settled to be shaken.

8. A term about which, when applied to a scheme of jurisprudence, there is some connision. Its three leading senses are distinguished thus:—(a) Taken broadly, equity means the doing unto all men as we would that they should do unto us. (b) In a narrower sense, equity is used in contradistinction to strict law; it expounds and limits the language of the positive laws, and construes them, not according to their strict letter, but rather in their reasonable and benignant spirit. (c) In the sense in which it is to be understood as the substantial justice expounded by the English courts of equity, it is the system of supplemental law administered in these, founded upon defined rules, recorded precedents, and established principles, the judges, however, liberally expounding and developing them to meet new exigencies. While it aims to assist the defects of the common law, by extending relief to those rights of property which the strict law does not recognize, and by giving more ample and distributive redress than the ordinary tribunals afford, equity by no means either controls, mitigates, or supersedes the common law, but rather guides itself by its analogies, and does not assume any power to subvert its doctrines. The Court of Chancery was formerly in England the especial court of equity, although many matters of equitable fursicition are still left to the chancery division in the first instance.

Equity is a roguish thing; for law, we have a measure, know wint to trust to: equity is according to the conscience of him that is chancellor, and, as that

7. S. Mill.

(Some men) fancy a regular obedience to one law will be a full equivalent for their breach of another.

Regers.

In chem. there is a law that if a body A unite

will be a full equivalent for their breach of another. Regers.

2. In chem. there is a law that if a body A unite with other bodies B, C, D, then the quantities B, C, D (the letters being used to denote the combining quantities as well as the bodies) which unite with it, or some simple multiples of these quantities, represent for the most part the proportions in which they unite among themselves. This law is called the law of equivalents, and the various quantities A, B, C, D (or a multiple of them) the equivalents of each other. Thus 1 part by weight of bydrogen unites with 8 parts by weight of oxygen to form water, with 16 of sulphur to form sulphuretted hydrogen; these quantities or their multiples are therefore regarded as equivalents of each other, 5 parts of oxygen uniting with 35 of chlorine to form chlorine monoxide, and 16 of sulphur with 8 × 2 of oxygen to form sulphurous oxide. When the atomic weights are taken into account (H=1, O=16, S=32, Cl=35 · 5) it is seen that one atom of hydrogen is equivalent to one of chlorine, and two atoms of hydrogen as unity, chlorine is what is called monatomic, oxygen and sulphur diatomic. Upon this equivalency or atomicity of the different elements is based their classification into monads, dyads, triads, tetrads, &c., and dashes are frequently appended to the symbols in a formula to show to which class the bodies belong, as H₂O', Willing, O''H₄ or CivH₄.

3. In gool. a stratum or series of strata in one district formed contemporaneously with 3. In gool, a stratum or series of strata in one district formed contemporaneously with a stratum or series of a different lithological character in a different region, or occurrying the same relative position in the scale of rocks, and agreeing in the character of its fossils if deposited under similar circumstances. Thus the Caen building stone of France is the equivalent of our Bath colite. colite.

Equivalently (ē-kwiv'a-lent-li), adv. In an equivalent manner.

We seldom in kind, or equivalently, are ourselves clear of that which we charge upon others. Barrow. clear of that which we charge upon others. Barrow.

-Er, affix. 1. A termination of many English nouns, converting the word to which it is added into a noun of agency. It is the Teutonic form equivalent to the Latin.
-or, and native words may be roughly distinguished from words of Latin origin by this distinction; as, hearer, learner, doer, teacher, from auditor, instructor, factor, doctor. It was formerly a sign of the masculine gender—-stre, ster indicating the feminine; thus weaver, baker, malter, singer, brewer were masculine; webster, bakester (baxter), maltster, songster, brewster, teminine. In spinner and spinster the distinction is still to some extent observed. Generally, however, the termination ones not indicate gender in any way, some nouns in er signifying a person or thing indifferently, as ruler, heater, grater, poker. Added to names of places it signifies an inhabitant of, or one that belongs to a place, as Londoner, Berliner, &c., a dweller in London, Berlin, &c.—2. The sign of the comparative degree of adjectives, and akin to Latin comparative termination or, Gr.-er in -eros.—3. An affix to verbs giving them a frequentative, and probably a diminutive, sense; as, swagger; spit, sputter; fret, fritter; pat, patter; wend, wander.

To which the whole creation moves. Tennyson. To which the whole creation moves. Tennyson.

—Event, Occurrence, Incident, Circumstance.

Event, that which comes out, that which springs from a previous state of affairs. Hence we speak of watching the event; of tracing the progress of events. An event is of more importance than an occurrence, and is generally applied to great transactions in history. Occurrence is literally that which meets us in our progress through life, and does not connect itself with the past as an event does. An incident is that which falls into a state of things to which it does not primarily belong; as, the incidents of a journey: it is applied to matters of minor importance. Circumstance, lift, that which stands round or attends; does not necessarily mean anything that happens or takes place, but may simply mean one of the surplace, but may simply mean one of the sur-rounding or accompanying conditions of an rounding or accompanying conditions of an occurrence, incident, or event. It is also applied to incidents of minor moment which take place along with something of more importance. A person giving an account of a campaign, might dwell on the leading events which it produced; might mention some of its striking occurrences; might allude to some remarkable incidents which attended it; and might give details of the favourable or adverse circumstances by which it was accompanied.—SYN. Incident, occurrence, issue, result, termination, conoccurrence, issue, result, termination, consequence, conclusion.

of others, or from inductions of reason; as,
our senses furnish evidence of the existence our senses infinish tomerae of the existence of matter, of solidity, of colour, of heat and cold, of figure, &c.; the declarations of a witness furnish evidence of facts to a court and jury; and reasoning, or the deductions and jury; and reasoning, or the deductions of the mind from facts or arguments, furnish evidence has been distinguished into intuitive and deductive. Intuitive evidence is of three kinds. (a) The evidence of axioms. (b) The evidence of consciousness, of perception, and of memory. (c) The evidence of those fundamental laws of human belief which form an essential part of our constitution; and of which our entire conviction is imand of which our entire conviction is im-plied not only in all our speculative reason-ings, but in all our conduct as active beings. Deductive evidence is of two kinds, demon-strative and probable; the former relating to necessary, the latter to contingent truths. Mathematical evidence is of the demonstrative kind. Probable evidence is founded on a belief that the course of nature will cona belief that the course of nature will con-tinue to be in time to come as it has been in time past. Evidence as to the authen-ticity or genuineness of a writing may be internal or external. Internal evidence is the evidence supplied by the composition and character of a work, as a poem or a painting; external evidence is the evidence brought in corroboration of the statements or genuineness of the work by neutral parties.

parties.

Internal evidence is generally deceptive; but the sort of internal evidence supposed to be afforded by comparative inferiority in artistic execution, is never free from great suspicion. Some of Plato's dialogues not being found equal to the exalted idea which his great works have led men to entertain, are forthwith declared to be spurious. as, the war drained the exchequer; in general;
as, the war drained court of record, founded
chiefly for the collection and care of the
royal revenues. Latterly, the jurisdiction
of the court was extended by allowing all
the king's debtors and farmers, and all
accountants of the exchequer, to sue all
manner of persons in this court, on the
plea that, by reason of the wrong done to
the plaintiff by the defendant, he was unable to discharge his debts to the crown—
which privilege was ultimately extended to
all the lieges, on the fiction that they were
crown debtors. The judges consisted originally of the lord treasurer, the chancellor
of the exchequer, and three barons. By
5 and 6 Vict. v. the equitable jurisdiction
of the court was abolished, and the chancellor of the exchequer, who belonged to
the equity side of the court only, ceased to
be one of the judges, these now consisting
of a chief baron and four (afterwards five)
puisne barons. This court is now a division
of the High Court of Justice, and its practice
in ordinary civil cases is the same as that
of the other divisions; but the practice in
revenue cases remains unaltered by the
Judicature Act of 1875. To this division
are specially assigned all matters which
were within the exclusive cognizance of the
Court of Exchequer.—In Scotland, the Court
of Exchequer was originally the king's revenue court, and was continued by the
Treaty of Union till the establishment of a
new court in the reign of Queen Anne, of
which the judges were the high treasurer
of Great Britain, with a chief baron and
four other barons. After various modifications the court ossessio ment and bearing interest. Exchequer bills form a principal part of the public unfunded debt of Great Britain.

Expletive (eks'plet-iv), n, 1. A word or syllable inserted to fill a vacancy.

lable inserted to fill a vacancy.

What are called expletives in rhetorical treatises are grammatically allied to the interjections, though widely differenced from them by the want of meaning, which the interjection is never without. I can hardly agree with Webster in his definition of the expletive, and still less in the statement with which he concludes it. 'The expletive,' says Webster, is a word or syllable not necessary to the sense, but inserted to fill a vacancy or for ornament; the Greek language abounds with expletives.' So far as the word answers no other purpose than 'to fill a vacancy,' it is properly expletive, but if it be appropriate and graceful enough to deserve the name of an 'ornament,' it is not superfluous, and therefore is not an expletive.

G. P. Marsh.

F.

F, the sixth letter of the English alphabet, is a labio-dental articulation, formed by the passage of breath between the lower lip and the upper front teeth. It is classed as a surd spirant, its corresponding sonant spirant being v, which is distinguished from f by being pronounced with voice instead of breath, as may be perceived by pronouncing ef, ev. (In if, of, however, it is=v.) The ilgure of the letter F is the same as that of the ancient Greek digamma, which it also closely resembles in power. F is a common consonant in English words, both initially, medially, and finally, in the latter two cases being often doubled. As an initial it is very common in conjunction with I and r, as in fly, free. In plurals it often becomes v, as in knife, knives, calf, calves; compare also life, live, strife, strive, &c. Anglo-Saxon f has often been changed into v in modern English, as in heaven, leave, carve, &c., but such a change (as in vixen) is rare initially. In enough, rough, trough, an f-sound now represents a former guttural. From several words f has dropped out, as from head, hawk, lord, woman. By Grimm's Law when words are common to English and Latin, Greek, Sanskrit, &c., wherever there is an f in English there is a p in these other tongues; thus E, foot = L, pes, Gr. pous, Skr. pidat, E, father L, pater, Gr. pater, Skr. pidri.—As a Latin numeral it signifies 40, and with a dash over the top, F 40,000. is a labio-dental articulation, formed by the passage of breath between the lower lip and A0, and with a dash over the top, F 40,000.

F often stands for Fellow; F.R.S. Fellow of the Royal Society; F.S.A. Fellow of the Society of Antiquaries.—F, in music, is the fourth note of the diatonic scale.—In the calendar F is one of the seven Dominical letters.

the truth of what is declared by another. the truth of what is declared by another, resting on his authority and veracity, without other evidence, or on probable evidence of any kind; assent of the mind to a statement or proposition of another, on the ground of the manifest truth of such statement or proposition; firm and earnest belief, on probable evidence of any kind. I have strong faith or no faith in the testimony of a witness, or in what an historian narrates. narrates.

narrates.

A third mode of separating faith and philosophy is that adopted by Sir William Hamilton, who lays down that faith has properly to do with the inconceivable, while philosophy has concern only with the knowable and cogitable. Faith may be defined as the mind in a state of conviction merely, while philosophy may be said to be the mind in a state of conviction regrarding supersensible things, no matter whether philosophical or not, and philosophy is the mind convinced one way or another, after a thorough scrutiny into the profoundest principles concerned.

Dr. Wallner.

2. The assent of the mind to what is given forth as a revelation of man's relation to God and the infinite; a settled conviction God and the infinite; a settled conviction in regard to religion: in this sense the word applies to all religions.—In Christian theol. the word implies (a) historical or speculative faith, or belief in the historic truthfulness of the Scripture narrative, and the supernatural origin of its teaching. (b) Evangelical, justifying, or saving faith, is the assent of the mind to the truth of divine revelation, on the authority of God's testimony, accompanied with a cordial assent mony, accompanied with a cordial assent of the will or approbation of the heart; an entire confidence or trust in God's char-acter and declarations, and in the character and doctrines of Christ, with an unreserved surrender of the will to his guidance, and dependence on his merits for salvation.

that all things happen by inevitable necessity.

Fatalists that hold the necessity of all human actions and events may be reduced to three heads—First, such as asserting the Deity, suppose it irrespectively to decree and determine all things, and thereby make all actions necessary to us. . . . Secondly, such as suppose a Deity, that acting wisely, but necessarily, did contrive the general frame of things in the world; from whence, by a chain of causes, doth unavoidably result whatsoever isso done in it. . . And, lastly, such as hold the material necessity of things without a Deity . . that is indeed the atheists.

1. Fidelity to a lord; faithful adherence of a tenant or vassal to the superior of whom he holds his lands; loyalty. Under the feudal system of tenures every vassal or tenant was bound to be true and faithful to his lord, and to defend him against all his enemies. This obligation was called his fidelity or fealty, and an oath of fealty as required to be taken by all tenants to their landlords. The tenant was called a liege man, the land a liege fee, and the superior liege lord. The law as to fealty continues unchanged, though it is not usual now to exact the oath of fealty. It is due from all tenants of land, except tenants in frankalmoigne, and those who hold at will or by sufferance. Though it has now nearly gone into disuse, it still serves to keep up the evidence of tenure when there are no other services due.—2. Feeling (fel'ing), n. 1. The sense of touch; the sense by which we perceive external objects which come in contact with the objects which come in contact with the body, and obtain ideas of their tangible qualities. It is by feeling we know that a body is hard or soft, hot or cold, wet or dry, rough or smooth. It is the most universal of all the senses. It exists wherever there are nerves, and they are distributed over all parts of the body. Were it otherwise the parts divested of it might be destroyed without our knowledge. Feeling exists in all creatures that have any sense exists in all creatures that have any sens at all; even some plants show a sensibility to touch.

Permentation (fér-ment-a'shon), n. [L. L. fermentation] 1. The conversion of an organic substance into new compounds in presence of a ferment. Fermentation differs in kind according to the nature of the substance which promotes it. Sugar in solution is liable to two principal kinds of fermentation (winous and lectic), both of which are probably due to the growth in the liquid of a mould or fungus. Fermentation may be checked or altogether prevented by anything which prevents the growth of the fungus, as by keeping away from the liquid the spores or germs from which the fungus springs, by the liquid being either too hot or too cold for its development, by its containing too much sugar, or by the presence of a substance (called an antiseptic) which acts as a poison on the fungus. Vinous fermentation is produced by the growth of the exast-plant (see Yrast); lactic fermentation is due to the presence in the liquid of Penticilium glaucum (common blue mould). In vinous fermentation takes place in milk in the process of becoming sour, when the sugar of the milk is converted into carbonic acid and alcohol, the nitrogenous element being assimilated by the rapidly developing ova of the fermentation occurs in liquids which have already undergone vinous fermentation. When exposed to the atmosphere such liquids become sour, and vinegar is produced. This change is probably due to the growth of a fungus, Mycoderma accti (the vinegar-plant). Other kinds of fermentation, occurring in mustand moistened with water, during which oil of mustard is produced. For an explanation of fermentation, in relation to the origin and spread of contagious diseases, see GERM THEORY.—2. common reservoir containing in its upper common reservoir containing in its upper portion (the air-chamber) air compressed by the working of the engine. A tube dips into the water in the reservoir, and to the upper end of this tube is screwed the leather hose through which the water is discharged. apper end or instance is served an relatater hose through which the water is discharged. The piston-rods are jointed to a double lever, the ends of which are connected with two long handles running parallel to the engine on each side, so that the lever may be worked by several men at once. The ends of the lever are thus raised and depressed alternately, and one piston ascends while the other descends, water being thus continually forced into the reservoir, except at the instant of the reversing stroke; and as the compressed air in the air-chamber performs the part of a reservoir of work the discharge of water from the hose is very steady. The engine is sometimes supplied with water by means of an attached cistern into which water is poured, but it is more usually furnished with a suction-pipe which renders it self-feeding. Fire-engines are renders it self-feeding. Fire-engines are now often worked by steam. Fire-escape (fire-käp), n. A machine for scaping from the upper part of a building

[Fr. flamme, L. flamma, flagma, from the root flag, whence flagre, to burn, to blaze; the root is seen also in Gr. phlegō, to burn.] I. A blaze; burning vapour; phlego, to burn.] 1. A blaze; burning vapour; vapour in combustion; or according to modern chemistry, hydrogen or any inflammable gas in a state of visible combustion. Flame is attended with great heat, and sometimes with the evolution of much light; but the temperature may be intense when the light is feeble, as is the case with the flame of burning hydrogen gas. The flame of a candle may be divided into three zones: an inner zone containing chiefly unburned gas, another zone containing partially burned gas, and an outer zone where the gas is comgas, another zone containing partially burned gas, and an outer zone where the gas is completely consumed by combination with the oxygen of the air. The luminosity of flame depends upon the presence of solid matter or of dense gaseous products of combustion.

Flamingo (fla-ming'gō), n. [Sp. and Pg. flamence, from L. flamma, flame, from its red colour.] A bird of the genus Phemicopterus, formerly placed in the order Grallatores, but now generally ranked among the Natatores or Palmipedes, and constituting a family Phemicopteridæ, allied to the Anatidæ. Its body is smaller than that of the stork, but owing to the great length of the neck and legs it stands from 5 to 6 feet high. The beak is naked, lamellate at the edges, and bent as if broken; the feet are palmated and four-toed. The common flamingo (P. ruber) occurs abundantly in various parts of Southern Europe. This bird resembles the heron in shape, but is entirely scarlet, except the quill-feathers, which are jet black. The tongue is fleshy, and one of the extravagances of the Romans during the later period of the empire was to have dishes composed solely of flamingoes' tongues. Flaminical (flaminiria-al), a. Flint (flint), n. [A. Sax. and Dan. fint. Sw. finta; akin to E. finter, a broken piece; G. finter (see FilnNem), and Gr. plinthos, a brick,] I. In mineral. a sub-species of quartz, of a yellowish or bluish gray or grayish black colour. It is amorphous, interspersed in other stones, or in nodules or rounded lumps. Its surface is generally uneven, and covered with a rind or crust, either calcareous or argillaceous. It is very hard, strikes fire with steel, and is an ingredient in glass and in all fine pottery war. The fracture of flint is perfectly conchoidal; though very hard it breaks easily in every direction, and affords very sharp-edged splintery fragments. Its true native place is the upper bed of the chalk formation, in which it is formed as a series of concretions, the silica in the shells of marine animals being attracted into nodules. being attracted into nodules.

Flint (flint), a. Made or composed of flint.—Flint implements, the name given by archeologists to the implements used by man before the use of metals, so called because, although occasionally found of granite, jade, serpentine, jasper, basalt, and other hard stones, those first studied were mostly formed of flint. They consist of arrow-heads, axe-heads or celts, lanceheads, knives, wedges, &c. Flint implements have been found, in the valley of the Somme and elsewhere, in apparently up-

heaved beds of 'drift,' and in connection with the remains of extinct species of the elephant, rhinoceros, and other mammals; and therefrom man's existence on the globe at a geological period anterior to the present has been inferred. Flint implements are still used by some savage tribes.

Flinters (flint'erz), n. pl. Flinders. [Vulgar.] Flint-glass (flint'glas), n. A species of glass, so called because pulverized flints were originally employed in its manufacture. It is extensively used for domestic purposes. Its dispersive power in regard to light renders it invaluable in the manufacture of the object-glasses of telescopes and microscopes, as by combining a concave lens of flint-glass with one or two convex lenses of crown-glass, which possesses a much less dispersive power, a compound lens is formed in which the prismatic colours arising from a simple refraction are destrayed and the leave workered enterworked.

are built in water-tight compartments, and ships to be repaired are easily floated into them, as they can be sunk to the required depth by the admission of water into the

compartments. When the vessel is docked, the floating-dock is raised by having the water pumped out till its bottom touches the keel of the ship. Props are then supplied to keep the ship in position, and the dock is raised still higher by the compartments being further emptied. Instead of compartments water-tight tanks may be used, and the dock raised and lowered on the same principle. Or again, floating-docks may be made so heavy as to sink by their own weight deep enough to allow the largest vessel to pass over their bottom. They are then raised by forcing down empty water-tight tanks, which lift dock and ship by their buoyancy. The cut represents the

A common mineral found in great heauty in Derbyshire; hence it is known in this country under the name of Derbyshire Spar. It generally occurs massive, but crystallizes in simple forms of the monometric system—viz. the cube, octahedron, dodecahedron, dec., and in combinations of the cube and octahedron. Pure fluor-spar contains 49.7 per cent. fluorine, 51.3 calcium. It is of frequent occurrence, especially in connection with metalliferous beds, as of silver, tin, lead, and cobalt ores, but is found in distinct veins in the neighbourhood of Freiberg and in the Harz. It is sometimes colourless and transparent, but more frequently it exhibits thats of yellow, green, blue, and red. From the general prevalence of a blue tint in the Derbyshire specimens it is there known as Blue-john. It is often beautifully banded, especially when in nodules, which are much Blue-john. It is often beautifully banded, especially when in nodules, which are much prized for the manufacture of vases, and occasionally used for beads, brooch-stones, and other ornamental purposes. The term fluor is derived from the fusibility of this fluor is derived from the fusibility of this substance, on which account it is sometimes used as a flux to promote the fusion of certain refractory minerals. It is manufactured at Matlock and Derby into a great variety of articles, chiefly ornamental, and was held in high esteem by the ancients for the arms are the controlled for the arms and the controlled for the contro

6. In math. (a) the infinitely small increase of a variable or flowing quantity in a certain infinitely small and constant period of time; a differential. (b) pl. The analysis of infinitely small variable quantities, or a method of finding an infinitely small quantity, which being taken an infinite number of times becomes equal to a quantity given. In fluxions, magnitudes are supposed to be generated by motion; a line by the motion of a point, a surface by the motion of a line, and a solid by the motion of a surface. The method of fluxions, first invented by Newton, does not essentially differ from that employed in the differential calculus invented by Leibnitz, except in the notation. Newton's notation was adhered to by English writers up to the early part of the present century, but the differential calculus is now universally employed. See DIFFERENTIAL.

Fluxional, Fluxionary (fluk'shon-al, fluk'shon-a-ri), a. Pertaining to or solved by fluxions; variable; inconstant.

The merely human, the temporary and fluxional.

Coleridge.

— Fluxionary calculus, the method of fluxions.—Fluxional or fluxionary analysis, the analysis of fluxions and flowing quantities, distinguishable from the differential calculus by its notation, though in all other respects the two methods are identical. Fluxionist (fluk'shon-ist), n. One skilled

Heoge, from fleigan, to fly; like G. fliege, from fleigen.] 1. In zool. a winged insect of various species, whose distinguishing characteristics are that the wings are transparent and have no cases or covers. By these marks flies are distinguished from beetles, butterflies, grasshoppers, &c. The true flies or Diptera have only two wings, viz. the anterior pair. In common language, fly is the house-fly, of the genus Musca. the genus Musca.

the genus Musca.

Being a 'popular name' the people have a right to mean what they choose by it, and they avail themselves of the right. Thus the fly of the farmer is usually the little hopping turnip-betel; the fly of the hop-grower is an aphis; the fly of the herdsman a gad; while to the citizen almost anything to be seen with wings is a fly. There are some, again, to whom list to black house-fly. Here at least is something definite. No, not even now, for these will, at least, claim their young house-fly, and their full-grown house-fly, and expect you to believe that late in the year their house-fly takes to biting you, little dreaming that the little fly, and the big fly, and the fly which bites you, not only are different species but even belong to different genera; that the little fly never grows big, that the big fly never was little, and that their house-fly could not bite you if he would.

2. In mach, an arrangement of vanes upon a revolving axis to regulate the motion of clock-work by the impact of the vanes against the air; a fanner: now chiefly used in musical boxes and the striking parts of clock machinery. The same name is also applied to other contrivances for regulating the motion of machinery, as to cross-arms, loaded at the ends with heavy weights, and placed at right angles to the axis of a windlass, jack, or the like; and to a fly-wheel. See Fly-WHEEL—3. In printing, same as Flier, 6.—4. In weaving, a shuttle with wheels driven through the shed by a blow or jerk.—5. In knitting machines, a piece for holding the needle in position while passing through a new loop; also called a Latch.—6. In spinning, one of the arms that revolve round the bobbin in a spinning-frame, and twist the yarn as it is wound on the bobbin. See Flier, 3.—7. That part of a vane which points and shows which way the wind blows. 8. The extent of an ensign, flag, or pendant from the staff to the end that flutters loose in the wind.—9. A light carriage formed for rapid motion; a hackney coach; a cab.—10. A hook dressed so as to resemble a fly or other insect used by anglers to catch fish. 11. In a theatre, a gallery running along the side of the stage at a high level, where the ropes for drawing up parts of the scenes, &c., are worked.—12 † A familiar spirit; a parasite. The birds which constitute this genus are The birds which constitute this genus are exceedingly numerous, and widely distributed over the globe. They are in many places of great use in destroying noxious insects. In habits they are solitary and untamable. They perch on the highest branches of trees, where they remain immovable watching for insects, only leaving to make a sudden dart at a passing fly which they seize with a snap of the bill, and then return. Only two species are British—the spotted flycatcher (M. grisola) and the pied flycatcher (M. dricavilla) and the pied flycatcher (M. dricavilla) both about the size of a sparrow. M. albicollis is a native of the south of Europe, though sometimes seen as far north as Holland.

Fly-water (fil'wa-ter), n. A solution of arsenic, decoction of quassia-bark, or the like, for killing flies.

Fly-wheel (fil'whel), n. In mach. a wheel with a heavy rim placed on the revolving shaft of any machinery put in motion by an irregular or intermitting force, for the purpose of rendering the motion equable and regular by means of its momentum. This effect results from a law of nature that all bodies have a tendency to continue in all bodies have a tendency to continue in their state either of motion or of rest until acted upon by some extraneous force. Thus

the rim of a fly-wheel, after a few revolutions, acquires a momentum sufficient to cause it to revolve with a velocity depending upon the resistance of the machinery and the augmentations and diminutions of the impelling power succeeding each other rapidly, while neither cause acts sufficiently long to either augment or diminish the velocity acquired in any considerable degree; and hence it remains equable, or nearly so. A fly-wheel is often used as an accumulator of force; thus, when a small steam-engine sets in motion a very large fly-wheel, the wheel acts as a reservoir of all the small pressures which have been communicated to it, and having thus concentrated them can apply them all together and at once when some great effect is to be produced. the rim of a fly-wheel, after a few revolu-

Font (font), v. [From L. fons, fontis, a fountain. The word font was introduced in A.
Sax. direct from the L., among other L.
ecclesiastical terms. See FOUNT.] 1. The
vessel used in churches as the repository
of the baptismal water. When baptism
by immersion was practised the baptistery
was furnished with a basin sufficiently
capacious to admit of the administration of
the rite according to the then prevailing
form. When affusion took the place of immersion the size of the basin was diminished,
and assumed the dimensions familiar to us
in most of the mediaval churches in Great
Britain and upon the Continent. The baptismal font consists of a basin or cup hollowed out of a solid block and supported
upon a stem. It is usually of stone, sometimes of lead, and sometimes of copper or
bronze. In general, the font, in external
form and character, followed the prevailing
style of architecture and ornamentation.
When not in use the font was covered. Originally, the covers were flat movable lids,
but were afterwards often very highly ornamented, and sometimes carried up to a very
considerable height in the form of spires,
and enriched with a variety of little buttresses, pinnacles, and other decorations. tresses, pinnacles, and other decorations

Football (futbal), n. 1. A ball consisting of an inflated ox-bladder, or a hollow globe of india-rubber, cased in leather, to be driven by the foot; hence, fig. any object subjected to many vicissitudes or changes of condition; as, he was the football of fortune.—2. A game played with a football by two parties of players, on a large level piece of ground, generally oblong in shape, and having in the middle of either of the ends a goal formed by two upright posts, 6 to 8 yards apart, with a barr or tape extended between them at the height of 8 or 10 feet from the ground. There are various styles of playing the game, but the two recognized in all important matches are the Rugby game and the Football Association game. In both games the main object is for either party to drive the ball (which is kicked off in the centre of the field) through the goal that their opponents are guarding, and thus count a goal against them. In the Rugby game the goal-posts are 18½ feet apart, and joined by a cross-bar at a height of 10 feet from the ground; and to score a goal the ball must be kicked over this bar by one of the opposite side. In the Association game the upright poles are 8 yards apart, and joined at 8 feet from the ground by a tape, under which the ball must pass to secure a goal. The Rugby game is much rougher and less scientific than the Association game, which discourages rough play and relies mainly on the skilful maneauving of the ball with the fact, it being forbidden to touch the ball with the fact, it being forbidden to for the next struggle, so that any inequalities of situation may be balanced.

For (for), conj. 1. The word by which a reason is introduced of something before advanced.
'That ye may be the children of your Father 'That ye may be the children of your Father who is in heaven; for he maketh his sun to rise on the evil and on the good.' In such sentences for has the sense of because, by reason that, as in No. 15 in preceding entry; with this difference, that in No. 15 the word precedes a single noun, and here it precedes a sentence or clause. In modern English this word is seldom used to introduce a reason for something still to be done a reason for something still to be duce a reason for something still to be stated, or for anything stated in a subor-dinate clause, but formerly it was not un-commonly used in both these cases.
